

## What is a Citric Acid Sachet?

BP Grade sterile citric acid powder, to dissolve Brown Heroin and Crack Cocaine for injection - an acid is required to reduce the solution. Using Citric acid in small amounts achieves the desired clear solution with low PH levels, which is safer for injecting.

<b>Contents:</b>	Citric Acid
<b>Colour:</b>	Yellow & White
<b>Thickness:</b>	Approx 1mm
<b>Weight:</b>	5g per strip of 10
<b>Normal Capacity:</b>	(Approx) 100g
<b>Sachet Dimensions (mm):</b>	50 (w) x 35 (h)

## Logistics

<b>Sachets per Strip:</b>	10pcs
<b>Sachets per Carton:</b>	5000pcs
<b>Carton Dimensions (mm):</b>	315 (w) x 220 (d) x 185 (h)
<b>Carton Weight:</b>	2.7kg

## Certifications

Pharmaceutical grade powder  
Sterilised by gamma radiation

## Benefits of the Citric Acid Sachet

- Safer to use than Lemon Juice or Vinegar
- Pharmaceutical grade sterilised powder
- Packed in individual foil sachets
- Easy to tear sachets for powder dispersion

## Safety Information

It is best not to inject drugs at all, but if you choose to do so then following the information below will help reduce vein damage by using the minimal acid required.

## How to use the Citric Acid Sachet

For an effective solution add Sterile water to Brown Heroin in cooking-up spoon. Very carefully add small amounts of Citric Acid while stirring with Mixing Needle and slowly heating the solution. Add more Citric acid a little at a time until the solution clears. You should not need more than 20mg (Approx 1/5th of the Sachet). When finished dispose of the Sachet and remaining content.
