- Excellent temporary closure ensuring no spillage of needles
- Capable of holding 20 x 1ml Insulin Needle & Syringe.
- Capable of holding 10 x 2ml Syringe with attached Hypodermic Needle.

How to use the SAFELOC[™] 0,35 Ltr.

Opening:

The containers are sold with body and lid assembled.

To open 'Slide' as shown.

SLIDE TO OPEN

Temporary Closure:

Slide swivel lid as shown. Bin now closed in a temporary position.

At this stage the cap can be re-opened by moving it back in the opposite direction.

SLIDE TO CLOSE

Permanent Closure:

From the temporary closure position, firmly press down on the positions shown until it clicks.

At this stage closure is permanent. Instructions also present on label.

PUSH DOWN

Use:

During use, open the cap and close temporarily when not in use.

Close permanently when full (Fill line indicated on label).

Safe Disposal:

Integrated 'Petal' aperture means syringes cannot be removed once fully inserted.

Safe disposal of syringe and needle up to 5ml syringes.

Needles and syringes inserted sharps side down meaning safe even when turned upside down.

Container provided with one non return 'Petal' opening.

Once filled, the container must be disposed of through incineration, releasing non-toxic emissions.
